

Incite™ Cortical Fibers

- 3D Fiber Scaffold
- Endogenous Growth Factors
- Optimally Shapeable and Expandable

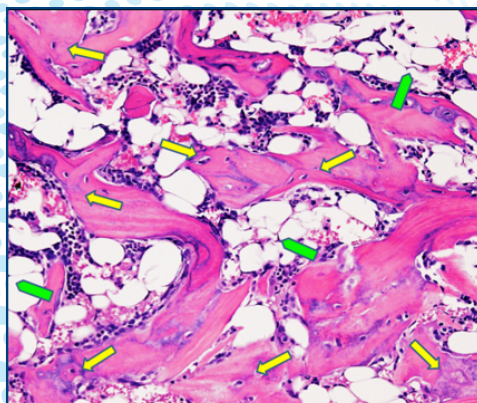

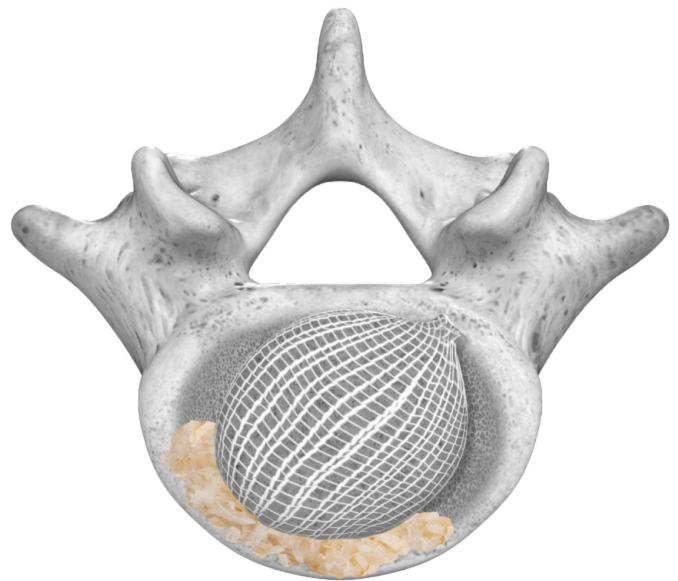

Incite™

Cortical Fibers

Incite™ Cortical Fibers and Incite™ Flow are versatile bone grafting options comprised of 100% demineralized allograft bone with cortical fibers.

Incite™ Fiber and Incite™ Flow fibers provide a natural scaffold for cellular attachment, through-growth and exposure of native proteins to induce new bone formation. The fibers' moldable and self-containing properties enable the graft to fill, expand, and conform to patient specific bony defects.

- The demineralization process exposes **naturally occurring growth factors** within the cortical bone.
- Interconnected 3D fiber architecture and increased surface area provide excellent scaffolds for **cellular attachment and proliferation**.
- **Rapid hydration** properties allow for use with BMA, PRP, blood, or saline for intraoperative ease and flexibility.
- Fibers can be packed into place, delivered through a bone funnel, or injected through a syringe to accommodate a **variety of complex grafting applications**.
- Once hydrated, the **fibers expand 25%** and have a moldable consistency that conforms to the patient's anatomy to promote graft incorporation.

Explant of Incite Cortical Fibers demonstrating numerous regions of new bone formation (yellow arrows) and the presence of bone marrow (green arrows)

Benefits

- 100% human demineralized cortical bone
- Offered in a syringe or ready to use vial for mixing
- Moldable and cohesive handling
- Expands to maximize contact with bony areas to enhance fusion
- Osteoconductive matrix
- Osteoinductive potential
- No extrinsic carrier

Incite Fibers

Incite Flow

Preparation For Use

- Prep Time: 5 minutes
- Hydrate fibers using a 1:1 ratio
(example: 5cc fiber : 5cc fluid)
- Per surgeon preference, hydrate with saline, blood, PRP or BMA
- Hydrate until desired consistency and handling are achieved

Ordering Information

Incite™ Fibers - Vial

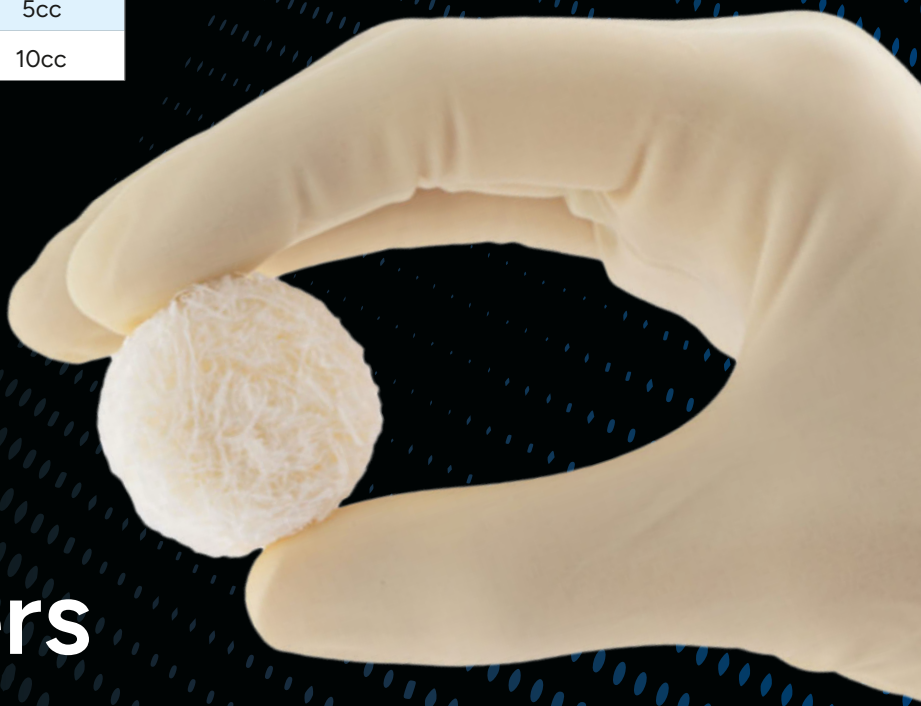

10cc

CATALOG #	DESCRIPTION	Volume
220025	Incite™ Cortical Fibers - Small	2.5cc
220005	Incite™ Cortical Fibers - Medium	5cc
220010	Incite™ Cortical Fibers - Large	10cc

Incite Flow - Syringe

CATALOG #	DESCRIPTION	Volume
230025	Incite™ Flow - Small	2.5cc
230005	Incite™ Flow - Medium	5cc
230010	Incite™ Flow - Large	10cc
