ORIO-C Cervical Cage System
Ordering Information

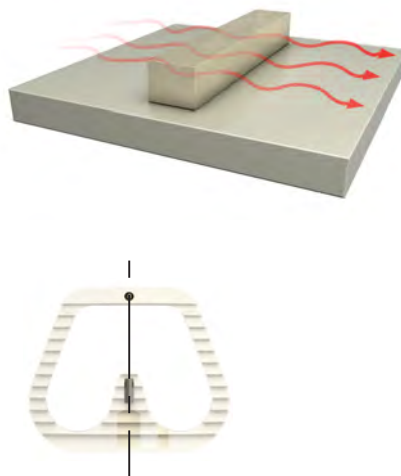

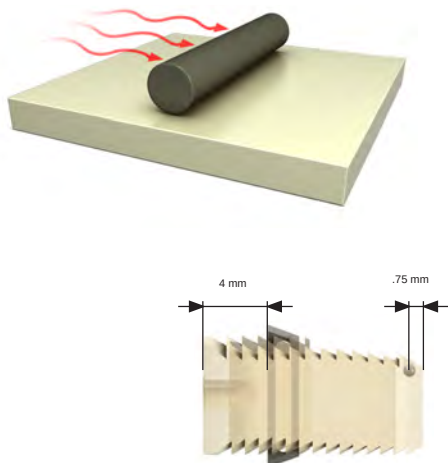

Implants

ORIO-C is a system of curved implants and instruments designed for anterior cervical interbody fusion (ACIF). ORIO-C was developed for the following purposes:

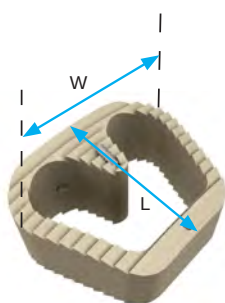

- To distract the disc space and restore normal disc height and physiological lordosis, thereby also widening the foramina
- To preserve the integrity of the vertebral body endplates
- To provide an optimal implant/endplate interface, thus considerably limiting the risk of subsidence into the adjacent vertebrae
- To stabilize the pathologically unstable segment
- To support bone growth through the implant

The proper positioning of the ORIO-C cage is checked with a tantalum marker and a titanium keel.

Thanks to the PEEK radiotransparency, the ORIO-C cage is invisible on X-Rays for a clear assessment of bone fusion.

ORIO-C Implant Ordering Information

ORIO Cervical PEEK-Optima® Cage, Anatomical w/Anchor	Length	Width	Height	Catalog n°
Size Small	12 mm	15 mm	4 mm	C7100-24
