

TIGERSHARK[®] STRAIGHT

3D Printed Titanium Lumbar Interbody

TIGERSHARK® STRAIGHT

3D Printed Titanium Lumbar Interbody

Introduction

TigerShark® Straight is a 3D printed interbody with our proprietary BioBond® Porous Trabecular Structure. It features a generous graft window and a smooth, bullet-shaped distal nose designed for fast insertion. Additionally, TigerShark® Straight is available in a variety of anatomic footprints and can be used for both posterior and transforaminal placement.

Features:

- Large center graft window for biologics
- Designed with a smooth bullet nose for fast insertion
- 9mm and 11mm widths, 24, 28, 32mm lengths available
- Built-in 6° lordosis
- Various heights: 9-18mm in 1mm increments (7-8mm available upon request.)
- Simple-to-use instrumentation

BioBond® Proprietary
Porous Trabecular Structure
